

HumiCal

Give your plants the missing ingredient they need to be more productive with HumiCal!

HumiCal by BW Fusion is an essential product created to keep your soil healthy and rich with nutrients. Calcium helps promote proper plant development, cell walls formation which ultimately provides the necessary strength for successful crops!

Looking to improve your soil and plant health?

BW Fusion HumiCal is a calcium supplement specially designed to give your plants the calcium they need for healthy growth. Calcium is an essential nutrient for proper soil structure, plant wall development, and crop production, and when deficient, these aspects of plant health will suffer. BW Fusion HumiCal is a bold step towards ensuring your plants have the calcium they need to reach their full potential.

The benefits of using HumiCal are two-fold. First, it provides a soluble calcium source for plants, which is essential for disease resistance and stress tolerance; secondly, calcium is essential in the soil for soil structure, which aids in porosity and oxygen to the soil profile, benefiting root growth and soil microbes.

PRODUCT FEATURES:

- » Immediately available to the soil and growing plants.
- » See first season results... No waiting for next years crop.
- » Specially formulated to help improve nutrient uptake in plants, leading to increased yields and better crop quality.
- » BW Fusion HumiCal is water-soluble, meaning it can be applied directly to the soil without needing to go through a biological breakdown process.
- » As soon as it's applied, BW Fusion HumiCal is available to the soil and growing plants, improving nitrogen efficiency when used in conjunction with liquid nitrogen.
- » Improves crop quality and productivity.

APPLICATION

- HumiCal can be applied on any cropping scenarios.
- Easy to use, with no need for additional additives, HumiCal is premixed and requires no additional water.
- Product does not mix with Sulfur, Phosphorus, Boron, or any other sulfate-based micronutrients. Do not use HumiCal with Roundup or 24D-Amine
- HumiCal can be applied preplant, at planting, and or in season with coulter and or Y-drop applications.
- 1-3 gal/acre

OUR MICROBES AMMONIFY NITROGEN. If you don't have soluble calcium present your plant won't take up ammonium. Provides a soluble calcium source so plants have the ability to uptake ammonium for efficiently
