

# SoyWORX™

Finally, a product that's dedicated and focused on soybean.

*You've been waiting for this!*

The most important thing you can do for maximum yields and early season plant performance is to give it good soil. BW-Fusion is proud to announce SoyWORX, the first of its kind dedicated to Soybeans!

## SoyWORX Technology

What if we told you that there was a way to maximize your soy crop ROI? That's why we created SoyWORX. It is explicitly designed for soy plants so you can ensure your plants are getting the nutrients they need to be productive, healthy, and strong below and above the ground.

Soy plants have a critical need for magnesium, calcium, and phosphorus from germination to the leaf stage. SoyWORX is the first to ensure maximum root structure that will produce a stacked plant with more lateral branching and work for you to be more efficient with your ROI.

## PRODUCT FEATURES:

- » Increases root structure for a more vertical root with a thicker diameter.
- » Promotes earlier nodulations.
- » Trace nutrients support hormonal growth and early season sun capture.
- » Ensures more lateral branching in a shorter, squattier plant.
- » Improves your efficiency and farm's profitability.
- » Multi-action carbon is specifically designed to cultivate the fungal network.

## APPLICATION

- Easy to use, with no need for additional additives.
- SoyWORX is a true, complete starter for soybeans!
- SoyWORX can be applied in-furrow as we plant
- 3 gal./acre

**Xplosion** is an all-natural molecular compound that is a game-changer for all plants. This powerful feature will feed soil microbes, speed up germination time and enhance nutrient uptake in plants while mitigating plant stress!

**Xplosion** features a complex blend of carbon sources and over 90 trace elements that feed the soil and stimulate root growth.
